Title:	A limit set intersection theorem for graphs of relatively hyperbolic groups
Authors:	Krishna, S. (/jspui/browse?type=author&value=Krishna%2C+S.)
Keywords:	Cannon–Thurston maps conical limit points graph of groups Relatively hyperbolic groups
Issue Date:	2020
Publisher:	Springer
Citation:	Proceedings of the Indian Academy of Sciences: Mathematical Sciences, 130(1)
Abstract:	Let G be a relatively hyperbolic group that admits a decomposition into a finite graph of relatively hyperbolic groups structure with quasi-isometrically (qi) embedded condition. We prove that the set of conjugates of all the vertex and edge groups satisfy the limit set intersection property for conical limit points (refer to Definition 3 and Definition 23 for the definitions of conical limit points and limit set intersection property respectively). This result is motivated by the work of Sardar for graph of hyperbolic groups
