Abstract:	Synthesis and X-ray structural characterization of pyridine-2- carboxaldehyde thiosemicarbazone (L), and its metal complexes, $[\text{Cu}(\text{L})(\text{OH}_2)](\text{ClO}_4)_2$ and $[\text{Pb}(\text{L})(\text{ONO}_2)_2]\text{n}$ are reported. X-ray diffraction reveals that the metal centres in the two complexes are distorted square planar and square pyramid geometries, respectively. Among the three compounds $[\text{Cu}(\text{L})(\text{OH}_2)](\text{ClO}_4)_2$ is found to be active against human keratinocyte cell line.
