Title:	Bis(amino)cyclopropenium salt Catalyzed 1,6-Conjugate Addition of Thiols to p-Quinone Methides
Authors:	Rana, Prabhat Singh (/jspui/browse?type=author&value=Rana%2C+Prabhat+Singh)
Keywords:	H-bond donor catalysis Para-quinone methides Cyclopropenium ion
Issue Date:	Dec-2019
Abstract:	Bis(amino)cyclopropenium salt has been utilized as a H-bond donor catalyst for the 1,6-conjugate addition of thiols to para-quinone methides. Here the bis(amino)cyclopropenium salt acts as a Brønsted acid for the catalysis. The transformation occurs at mild conditions and is tolerant to a variety of functional groups. This protocol provides an easy and simple access to various unsymmetrical diarylmethyl thioether in good to excellent yield.
