Title:	Comparative structural studies of peptide transporters and their roles in physiological processes
Authors:	Bhojane, Shubham (/jspui/browse?type=author&value=Bhojane%2C+Shubham)
Keywords:	Chemistry Physiological
Issue Date:	30-Sep-2019
Publisher:	IISERM
Abstract:	The POT family of membrane transporter proteins shows remarkable feature of diverse substrate promiscuity. This promiscuity has led to development of peptide based pro-drugs that use PepT1 and PepT2, mammalian homologues, to improve oral drug delivery. Here I tried to classify 46 POT family transporters on the basis of transmembrane α -helical spanners and to establish evolutionary relationship between POT family members and by sequence alignment technique looked into residues conserved in POT family members.
