Title:	Bias in the Distribution Of Primes
Authors:	Malik, Nishant (/jspui/browse?type=author&value=Malik%2C+Nishant)
Keywords:	Mathematics Primes
Issue Date:	13-Jul-2017
Publisher:	IISER-M
Abstract:	Any model based on the randomness of primes would strongly suggest that every residual class $a(\text{mod } q)$ must contain roughly the same number of primes for $(a; q) = 1$. But despite the obviously seeming flow of logic, the above is inaccurate as a bias is observed in the distribution of primes when taken from different residual classes. A bias also exists in the distribution of prime pairs of form $(p; p + 2k)$ where $k \geq N$. This report is a humble attempt to discover these biases and provide conjectural explanation of such phenomena.
