Title:	Can low power laser induce dimple on air-water interface?
Authors:	Verma, Gopal (/jspui/browse?type=author&value=Verma%2C+Gopal) Gaurav, Abhishek (/jspui/browse?type=author&value=Gaurav%2C+Abhishek) Nair, J. (/jspui/browse?type=author&value=Nair%2C+J.) Singh, K.P. (/jspui/browse?type=author&value=Singh%2C+K.P.)
Keywords:	Fluid interfaces Surface tension Air-water interface
Issue Date:	2013
Publisher:	Optical Society of America
Citation:	2013 Conference on Lasers and Electro-Optics, CLEO 2013
Abstract:	We investigate deformations of fluid interfaces caused by small ($\sim nN$) optical force of a low power laser beam under total-internal-reflection. For air-water interface deformations are undetectable, unlike recently claimed in ref. [3]. Using a critical fluid-fluid interface having weak surface tension large fluid-lens effects in the form of a bump are seen. Our observations support standard optofluidic force-balance with potential for technological applications.
