Title:	Tune-out wavelengths of alkali-metal atoms and their applications
Authors:	Arora, Bindiya (/jspui/browse?type=author&value=Arora%2C+Bindiya)
Issue Date:	2011
Publisher:	American Physical Society
Citation:	Phys. Rev. A 84, 043401
Abstract:	Using first-principles calculations, we identify “magic-zero” optical wavelengths, $\lambda_{\text{zero}}$ , for which the ground-state frequency-dependent polarizabilities of alkali-metal atoms vanish. Our approach uses high-precision, relativistic all-order methods in which all single, double, and partial triple excitations of the Dirac-Fock wave functions are included to all orders of perturbation theory. We discuss the use of magic-zero wavelengths for sympathetic cooling in two-species mixtures of alkalis with group-II and other elements of interest. Special cases in which these wavelengths coincide with strong resonance transitions in a target system are identified.
Description:	Only IISERM authors are available in the record.
