Title:	Galois cohomology for Lubin-Tate (φq,ΓLT)-modules over coefficient rings
Authors:	Aribam, Chandrakant (/jspui/browse?type=author&value=Aribam%2C+Chandrakant)
Keywords:	Galois cohomology Local fields
Issue Date:	2022
Publisher:	Springer Nature
Citation:	Research in Number Theory, 8(4), 104.
Abstract:	The classification of the local Galois representations using (ϕ,Γ) -modules by Fontaine has been generalized by Kisin and Ren over the Lubin-Tate extensions of local fields using the theory of $(\phi q,\Gamma LT)$ -modules. In this paper, we extend the work of (Fontaine) Herr by introducing a complex which allows us to compute cohomology over the Lubin-Tate extensions and compare it with the Galois cohomology groups. We further extend that complex to include certain non-abelian extensions. We then deduce some relations of this cohomology with those arising from $(\psi q,\Gamma LT)$ -modules. We also compute the Iwasawa cohomology over the Lubin-Tate extensions in terms of the ψq -operator acting on the étale $(\phi q,\Gamma LT)$ -module attached to the local Galois representation. Moreover, we generalize the notion of $(\phi q,\Gamma LT)$ -modules over the coefficient ring R and show that the equivalence given by Kisin and Ren extends to the Galois representations over R. This equivalence allows us to generalize our results to the case of coefficient rings.
